

Code42 CrashPlan app - How to Check Your Backup Usage

Purpose of this wiki:

How to check your CrashPlan Pro disk quota usage.

Find the size of selected files on your local computer:

1. In /Applications folder open Crashplan.app
2. You will find your backup set size by letter "h"

3. If you have multiple computers you will need to repeat this for each and add up the total disk usage.

For more information please see https://support.code42.com/CrashPlan/6/Code42_app_reference/Code42_app_reference

Notes:

Why the amount of space stored on the server and on your local computers are different

CrashPlan uses a process called [deduplication](#), a data compression technique used to conserve storage space. CrashPlan first shrinks your data by compression and then only backs up block level changes to the original data. In addition a 90 day history of the changes is preserved. This is why your total server storage are often larger than your total files selected.

To check your disk space usage please see this page:

[Calculating Disk Space Usage](#)
