

Installing 64bit gfortran

Paul Dean updated October 1, 2014 at 2:01 PM

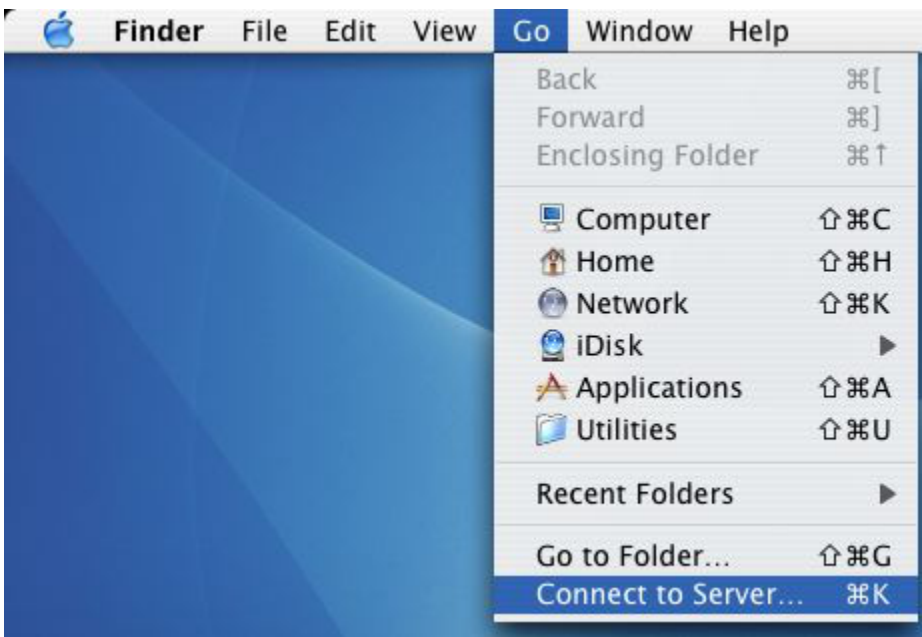

Questions Addressed

- How do I install 64-bit gfortran? How do I install 64-bit gfortran?

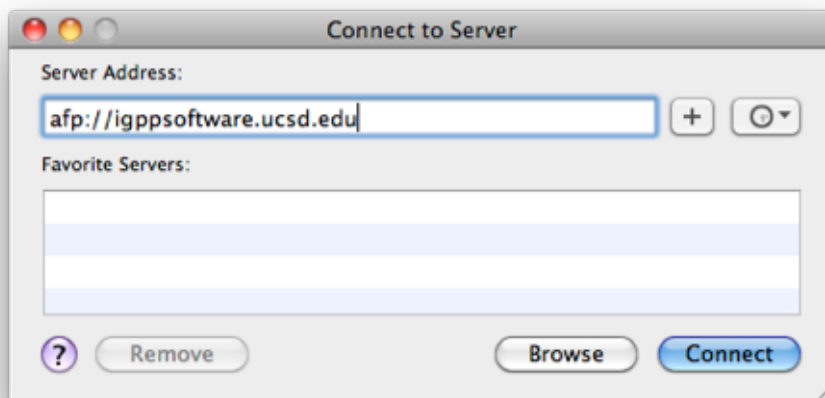

Installation Instructions

VPN is required, see [How to VPN into the UCSD network](#)

1. In **Finder**, navigate to Go in the top menu and choose **Connect to Server** Connect to Server . Alternatively, you can open Finder and press Command + K.

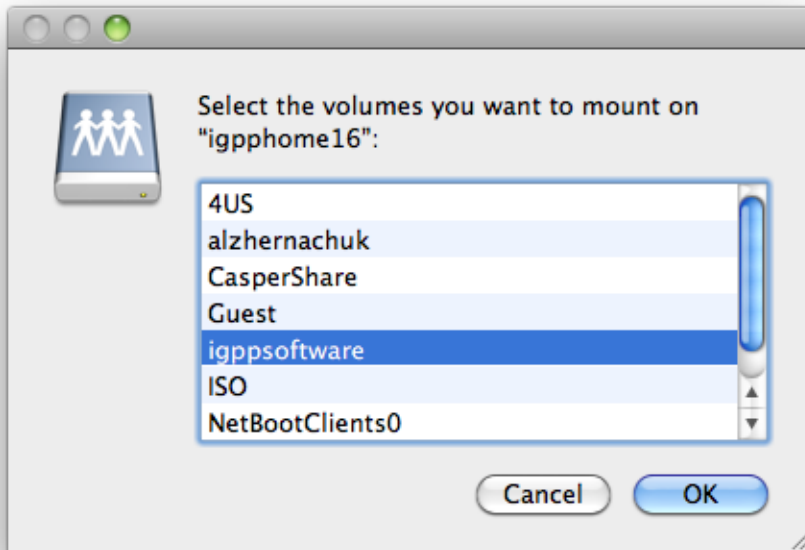

2. Type in `afp://igppsoftware.ucsd.edu` and click '**Connect**'.

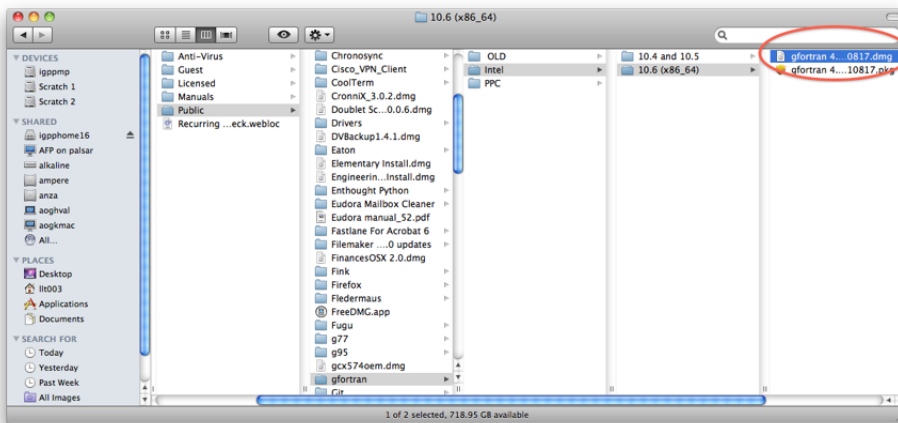

3. Type in your Open Directory **username** and **password**.

4. Select **igppsoftware** and click **OK**.

5. Navigate to the **Public > gfortran**.

6. Navigate to **Intel > 10.6 (x86_64)** folder inside of the **Intel** folder and open the **gfortran.dmg** (named according to version). This should mount the installer on your Desktop.
7. Run the installer as you would normally.
